EDUCATION

Bina Nusantara University (BINUS) Jakarta, Indonesia

Bachelor of Computer Science in Database Technology *Expected 2028*

Cumulative GPA: 3.72 / 4.00

Relevant Coursework: Database Systems, Data Warehouse & ETL (Pentaho), Data Visualization (Tableau), Human-Computer Interaction, Algorithms & Programming.

Sekolah Kemurnian II Jakarta, Indonesia

High School Diploma (Science / MIPA Track) *Graduated 2024*

TECHNICAL SKILLS

Data Analytics & BI: Tableau Desktop, Executive Dashboard Design, KPI Formulation, Exploratory Data Analysis (EDA), Advanced Excel.

Databases & ETL: SQL (MySQL, PostgreSQL), Pentaho Data Integration (Spoon), Star-Schema Modeling, Dimensional Warehousing, Data Normalization.

Programming & Tools: Python (Pandas, NumPy, Matplotlib, Seaborn), C, Git, GitHub, Jupyter Notebooks, Vercel, Netlify.

Core Competencies: Data Cleaning, Quantitative Analysis, Business Logic Modeling, AI-Assisted Prototyping, Cross-Functional Teamwork.

PROJECTS & RESEARCH

Portfolio Credit Risk & Delinquency Intelligence | Tableau Desktop 2026

- Analyzed enterprise credit dataset comprising **2.26 million loan accounts ($34.01 Billion funded volume)** spanning 2008–2018 to evaluate credit risk distribution and portfolio default rates.
- Architected interactive executive Tableau dashboard tracking default rate (NPL) escalation from **Grade A (5.04%) to Grade G (41.40%)**, validating interest rate risk premiums.
- Formulated Debt-to-Income (DTI) underwriting risk matrices and state-by-state delinquency maps to identify high-risk borrower profiles and recommend stricter verification policies.

Comparative Analysis of Low-Code vs. Code-First ETL Pipelines | IEEE Paper 2026

- Co-authored IEEE-format research paper evaluating low-code ETL (Pentaho PDI) vs. code-first Python pipelines across macroeconomic datasets covering **184–212 countries**.
- Constructed visual ETL workflows using Row Normalizer, Filter Rows, and Merge Joins to transform multi-source CSVs into structured **Star-Schema Fact and Dimension tables**.
- Evaluated pipeline execution latency, data lineage visibility, and schema auditability to formulate architectural guidelines for enterprise data warehousing.

GeForce GPU Specification Pipeline & Interactive Explorer | Python (Pandas) 2026

- Developed end-to-end Python pipeline cleaning specifications for **46 NVIDIA GPUs** across 5 architectures and engineered compute metrics (**FP32 TFLOPS**, Price/Performance ratios).
- Conducted exploratory data analysis (EDA) using Seaborn, revealing strong correlation (**r = 0.88**) between CUDA cores and MSRP, alongside diminishing returns above $800 price tiers.

Global Bike Retail Seasonal Demand & Revenue Optimization | Tableau Desktop 2025

- Cleaned and transformed **113,000+ transaction records** into an executive retail intelligence dashboard driving inventory planning and demand forecasting.
- Discovered bi-annual seasonal revenue peaks in summer and December (**$9.09M peak; $85.27M total revenue, $32.22M gross profit**), formulating pre-season restocking strategies to mitigate stockouts.

EXPERIENCE & LEADERSHIP

Nasi Tim Mimi Jakarta, Indonesia

Digital Merchant Onboarding & Operations *2019 – Present*

- Spearheaded digital transformation for family business by registering, onboarding, and configuring store operations across online food delivery platforms (**GoFood, GrabFood, ShopeeFood**).
- Managed online catalog listings, promotional pricing strategies, and high-volume order fulfillment during peak operating hours, expanding digital customer reach.

- Delivered direct frontline customer service and managed daily order packaging, improving delivery handoff speed and order accuracy.

EVOKE Olympus Event Committee Jakarta, Indonesia

Logistics & Equipment Division (Perkap) *2023*

- Coordinated end-to-end stage equipment procurement, inventory tracking, and field layout setups under strict event production schedules.
- Collaborated with 5+ cross-functional committee divisions to rapidly resolve unexpected on-site logistical hurdles, ensuring seamless multi-day event execution.
